

Delivering innovation that matters – using cyber physical systems

Co-summit speakers corner March 2015 –
Philips (R. Begeer & C. Garos)

Berlin March 9, 2015

A new dynamic

- People are living longer with continuous chronic diseases, creating the need for more specialized care, in both the hospital and the home
- Healthcare systems are challenged to improve access and quality of care, manage resources, and treat patients in lower cost settings
- Empowered consumers are increasingly seeking new ways to take control of their health
- Digital tools and data-driven capabilities are driving increased collaboration between patients and clinicians across the health continuum

The time is right for new thinking and partnerships

Your needs today, and tomorrow

We're getting older and sicker

By 2050, 50% of the developed world is projected to be chronically ill.

We don't take good care of ourselves

Obesity, heart disease and cancer are global health issues that are worsened by the way we live.

Demand for care is growing

There are simply not enough nurses and doctors to cope with our growing (and aging) population. Rising healthcare costs are unsustainable.

Healthcare is evolving. Dramatically.

“Healthcare will soon become more patient-friendly and tailored... the greatest progress is being made where governments are accelerating innovation and seeking public-private partnerships around outcomes-based care.”

HealthCast 2010, PWC Health Research Institute

How can electronic components and systems contribute to the necessary innovation of healthcare ?

Three Classes of Healthcare

(ECSEL MASP 2014)

Home Healthcare

Improving the **quality of life** for at-risk individuals while easing the burden on the healthcare system and **lowering the overall cost of care**

Hospital Healthcare

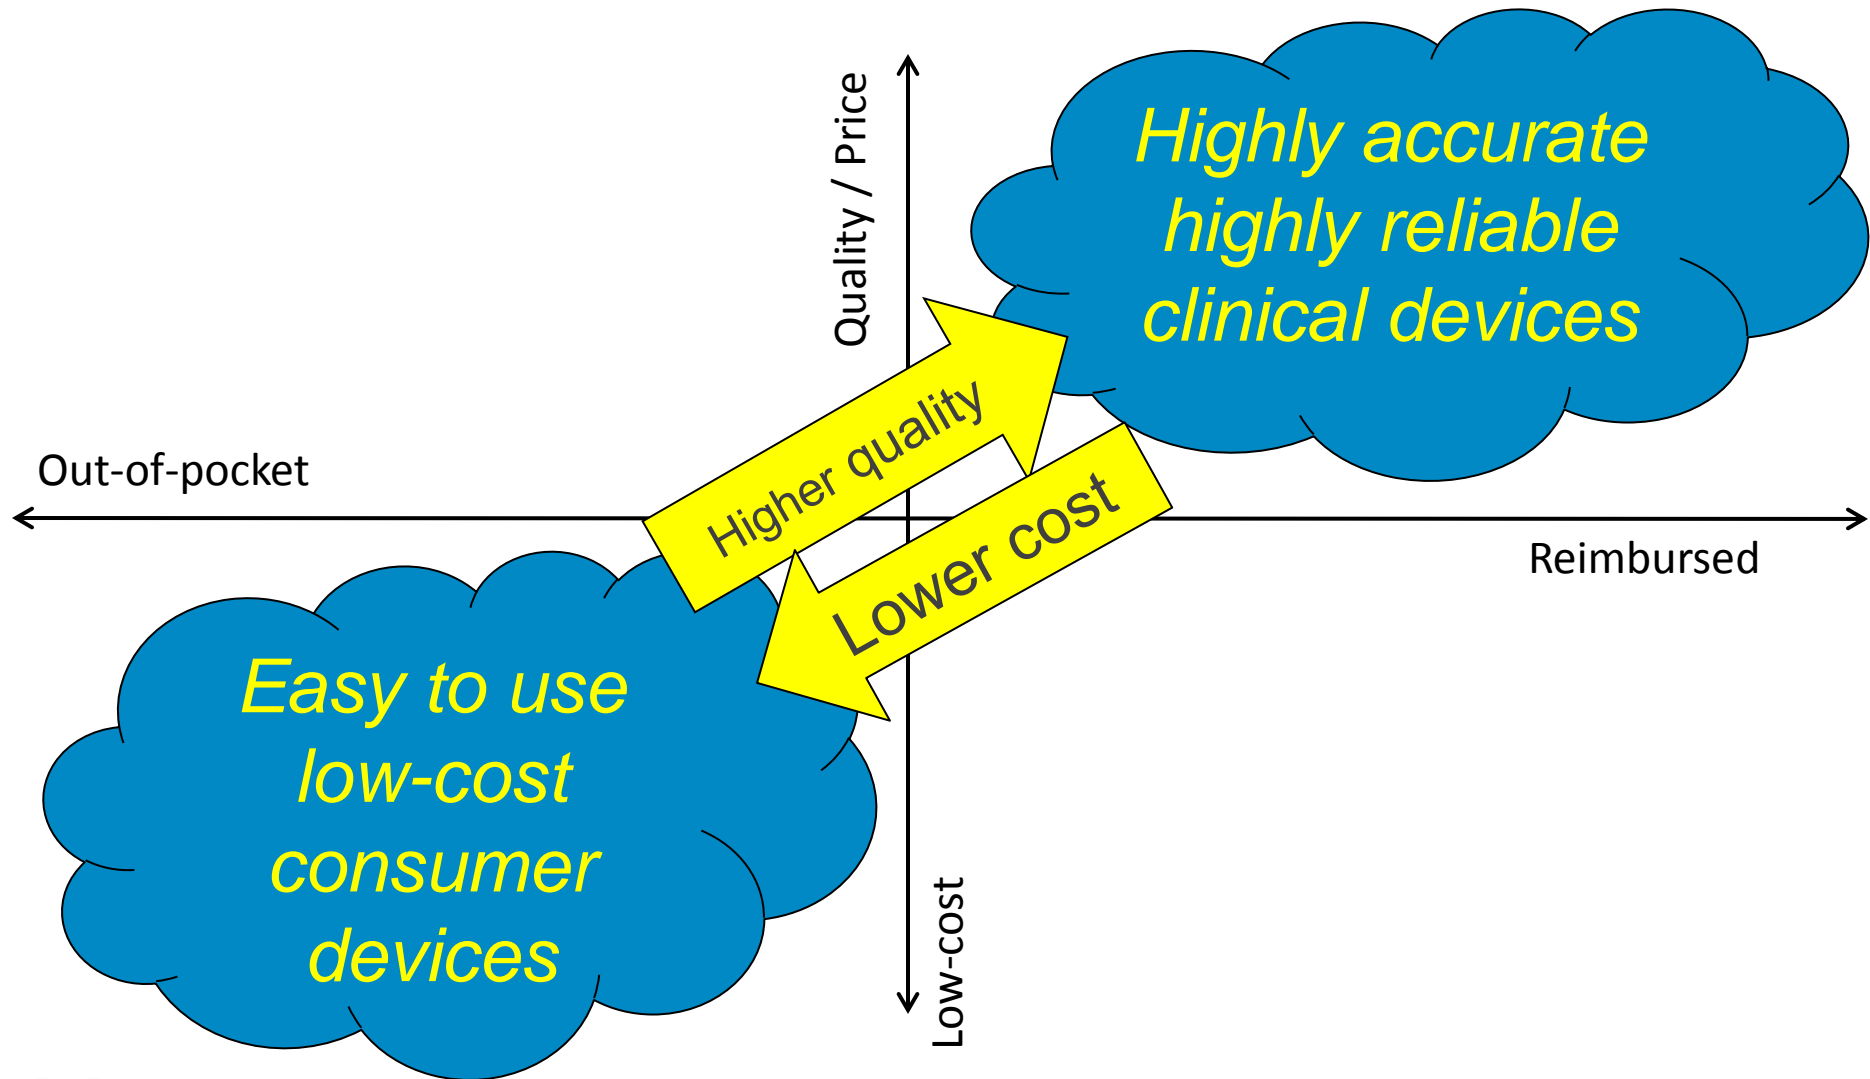

Solving most critical and pressing healthcare issues that require a.o. complex **diagnostics** through advanced imaging, minimal invasive **interventions** and cost-effective **therapy**

Heuristic Healthcare

Increasing the speed of pharmaceutical development and body fluid **sample analysis** though advanced **analysis tools** that allow **rapid screening** of chemical compounds, real-time response measurements with **multi-parameter bio-sensors**

A challenge to address* **Hospital**

Home

* inspired by Yazicioglu Firat, IMEC

PHILIPS

Changing digital health landscape requires a fundamentally different informatics approach

- Enabling **population health management, including Healthy Living and Prevention**
- **Patient centric solutions**, with built in **collaboration** models across the health continuum
- **Integrating data from disparate point solutions** across hospitals, physician practices, insurance, consumer homes
- Providing **actionable and context sensitive information** to clinicians, patients and care givers

CPS important to contribute in trend from the hospital room to the living room

Healthy Living

We support people to live a healthy life based on personal hygiene and nutrition in a healthy home environment.

Prevention

We provide digital solutions to measure, monitor, and motivate people to manage their own health.

Diagnosis

We drive definitive diagnosis, ensuring the right diagnosis is delivered the first time.

Treatment

We create new clinical procedures for safer and more effective adaptive therapies.

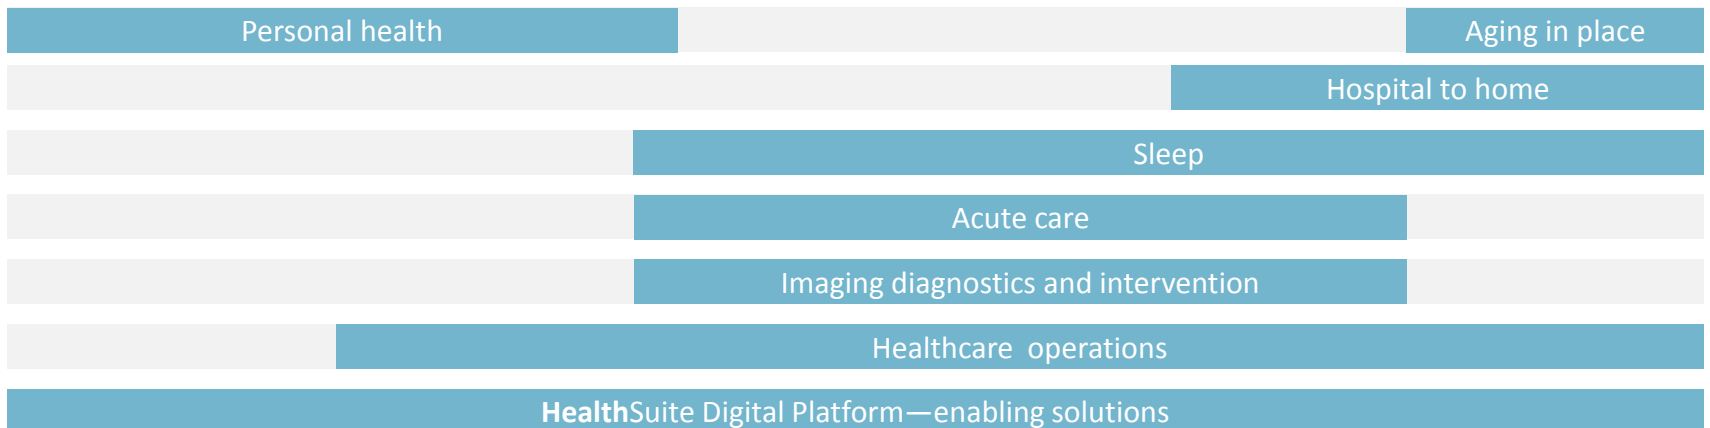

Recovery

We support recovery through ubiquitous monitoring that improves health quality at a lower cost.

Home Care

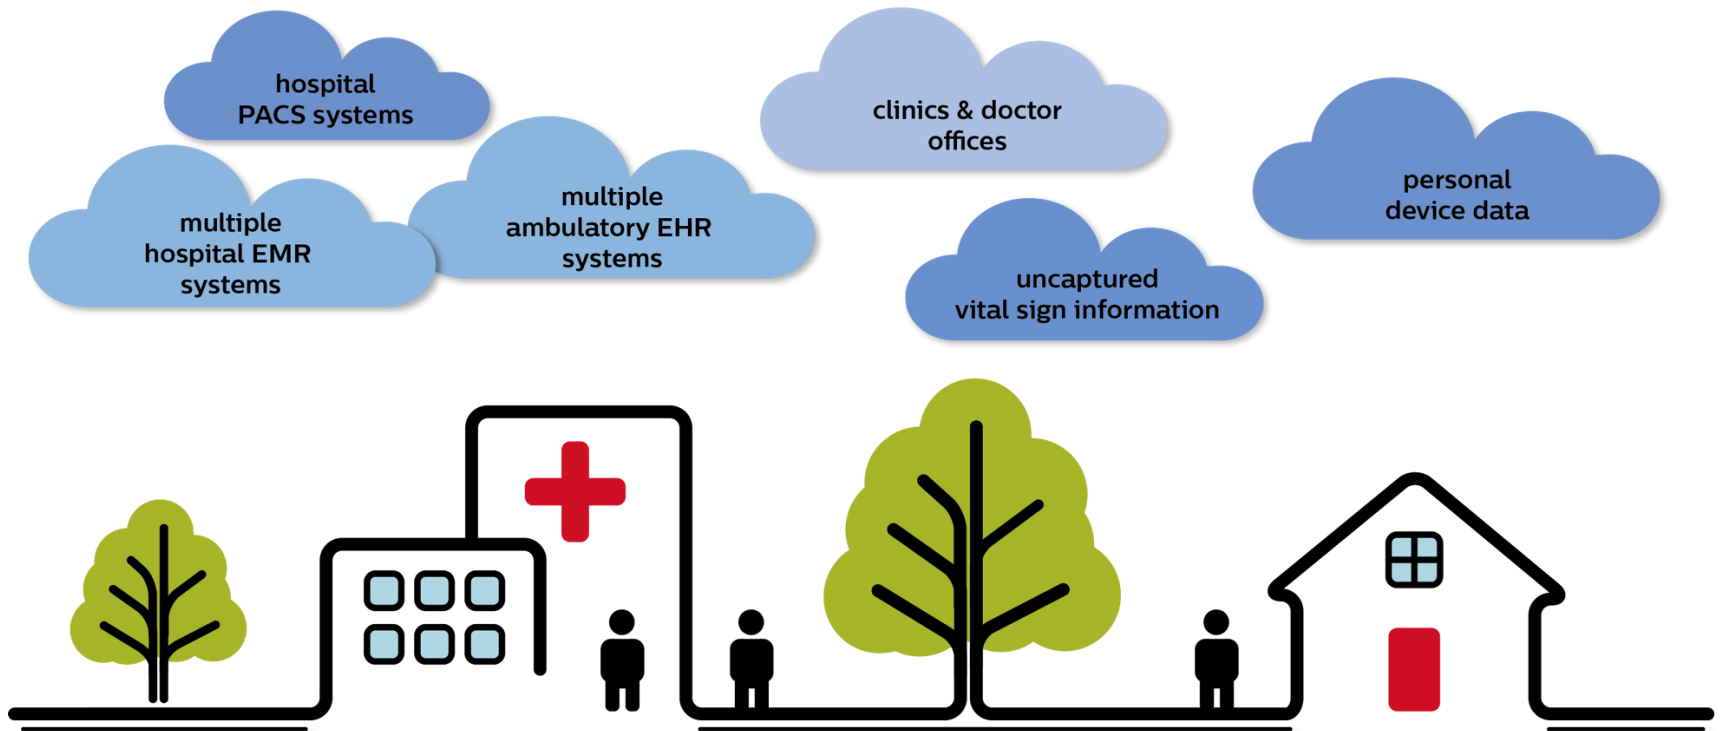

We connect hospital to home to support transitions, independent living and aging in place.

Creating a healthier tomorrow

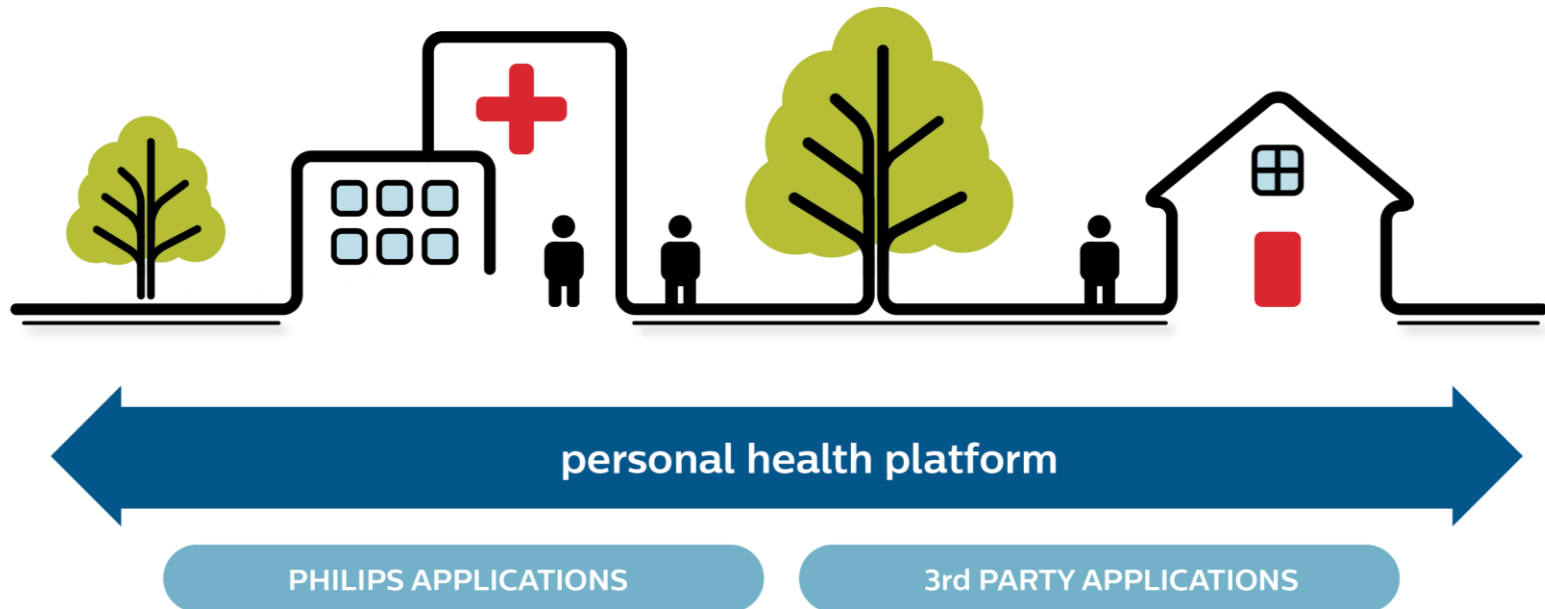

The information exists, but is not very usable

Today we find a disconnected landscape of rich information – whether in hospitals, clinics or the home

HealthSuite DigitalPlatform

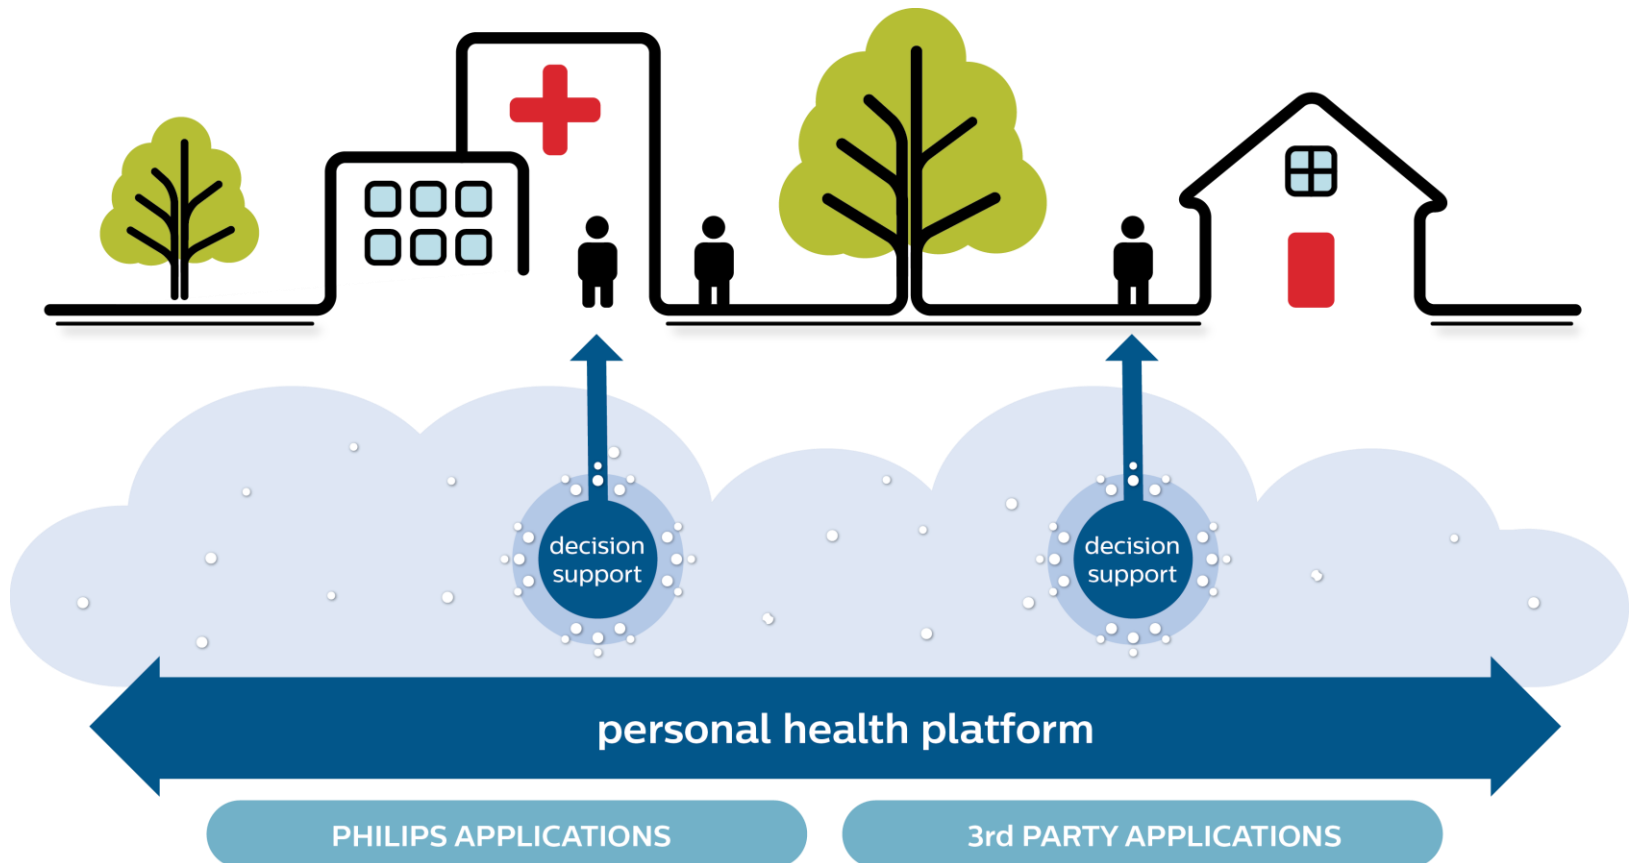

To capture and integrate patient information regardless of location, source or vendor through a common user experience

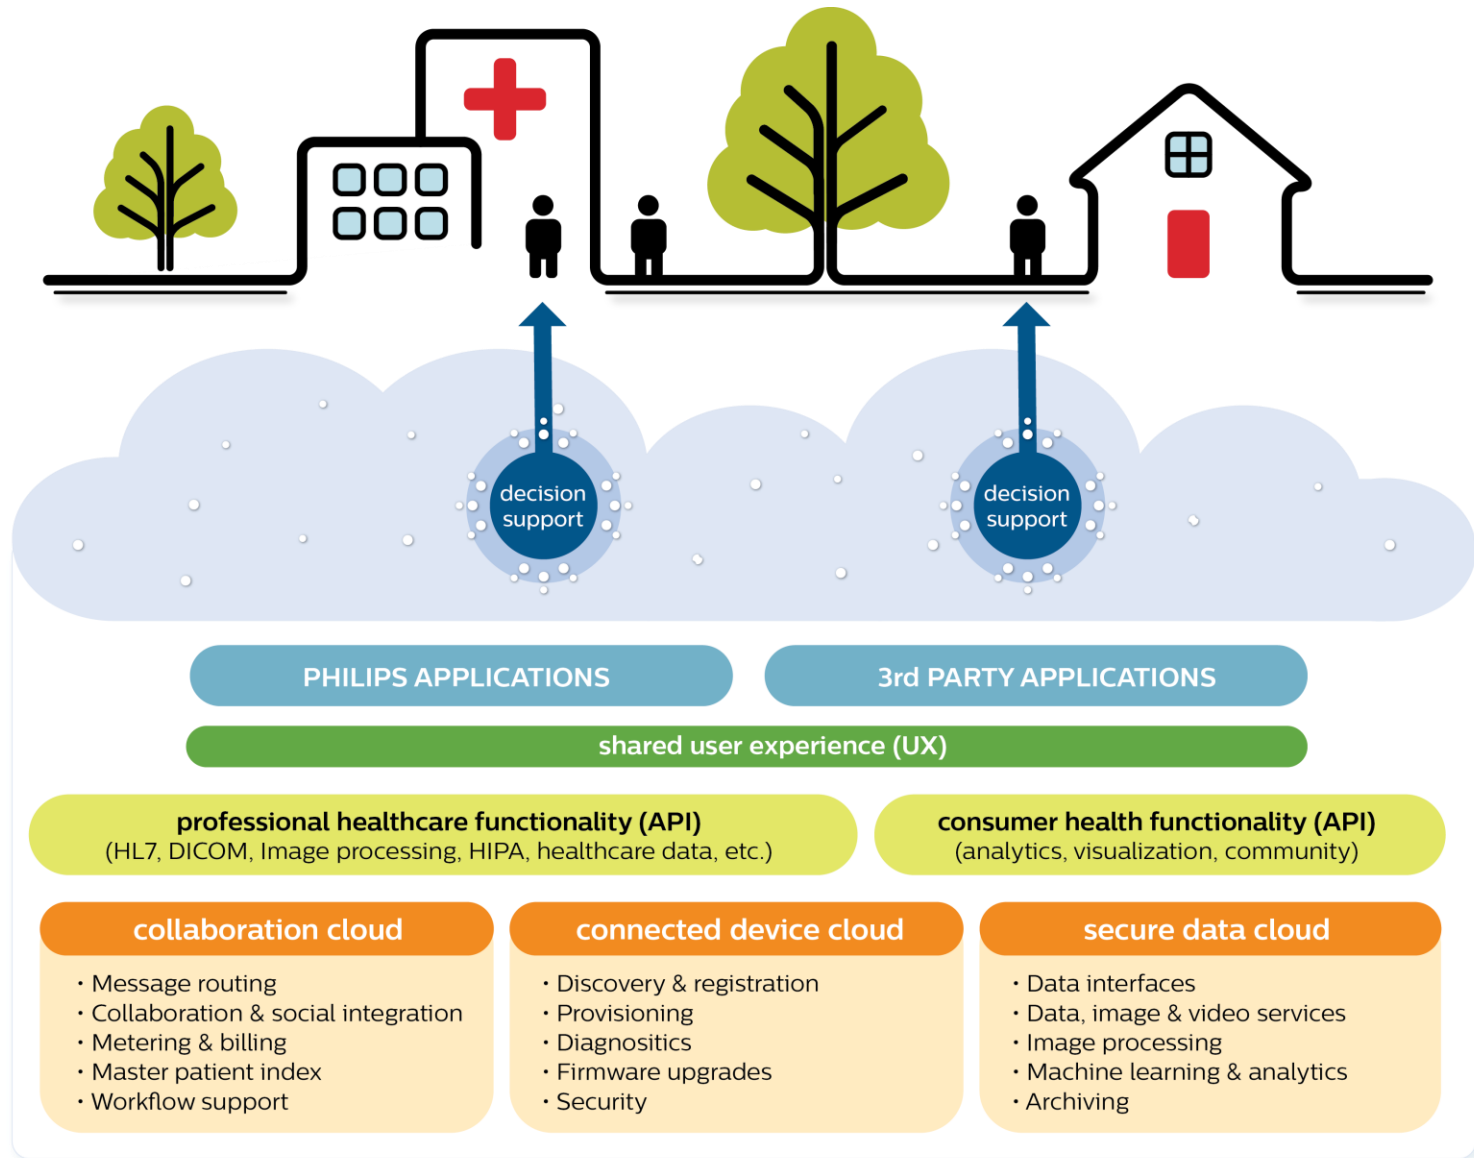

**a people-centric, open platform for the development of Philips
and 3rd party specialized applications**

Designed to enhance decision-making

For both healthcare professionals and consumers by incorporating advanced visualization and decision support analytics

Built to be flexible, scalable and cost effective

Key takeaways

- New solutions for **population health and support for the Health Continuum**, grounded in big data, social and mobile technologies
- The cloud based **HealthSuite Digital Platform** is the foundation for all connected health devices and informatics products
- It is the foundation for an **open ecosystem** that will **drive rapid innovation** to deal with the challenges along the Health Continuum
- **Engage with you** so together we can create the future of healthcare

HealthSuite device cloud

The device cloud is composed by 5 major components (see below).

The **Enabling Platform** is the main component, it contains a group of functional **logically grouped** building blocks (see Functional Blueprint slide) that can be independently deployed **anywhere in the world**.
