Meeting: ARTEMIS Brokerage, Berlin
Speaker: Margriet van Schijndel*
Date: 7th February 2018

* EARPA Secretary General
EARPA Mission

- To take on a **positive role in enhancing networks** of excellence and creating specific thematic networks within the framework of the EU.
- To support and facilitate the **forming of consortia**, the **preparation and co-ordination of projects** / program proposals in the context of the European research area and Framework programs.
- To **promote the awareness and understanding in the automotive industry –and beyond-** of the specific role and contribution of the members.
- To promote the high-tech character of the automotive industry and its **great potential for future innovation** and new opportunities.
- To enhance the **mobility of automotive scientists** and engineers within Europe.
- To supply assistance and collective services for its members such as the **organisation of conferences** and seminars, the **publication of newsletters**, etc.
The most prominent independent R&D providers

- 51 members in 17 countries, including Turkey & Norway
- About half are companies and RTOs
- About half are universities
- A strong and pro-active network
- High level research, supporting the industry & policy makers
- EARPA members offer a comprehensive portfolio of RTD
- Leading knowledge across all relevant technology areas
- Independent
EARPA’s neutral but involved position amongst many stakeholders
Our Membership

Within the 51 member organisations, there are about 660 researchers who are active in EARPA.

6 Founding Members
EARPA Board & Contact

EARPA RTD: helping to solve grand societal and industrial challenges
EARPA contributions to Horizon 2020

1. EARPA’s high-level position paper
2. Regularly updated position papers from each EARPA Task Force – each focused on part of automotive R&D
3. Cross-cutting issue position papers: strengthening our system approach
   - Cyber security
   - Automated driving
   - Urban Mobility Services
4. Participation in Experts Groups, Answering EU Consultations
5. Contributions to European Visions and RTD Roadmaps
EARPA: Members operate over the full innovation process from basic research to product validation

- **Basic Research**
  - 1. Basic Principles Observed and Reported
  - 2. Technology Concept and/or Application Formulated
  - 3. Active R&D Proof of Concept
- **Research to Prove Feasibility**
  - 4. Component Validation in Laboratory Environment
  - 5. Component Validation in Operational Environment
  - 6. Prototype Demonstration in Relevant Environment
- **Technology Demonstration**
  - 7. System Prototype in Operational Environment
  - 8. System Qualified through Test and Demonstration
  - 9. System Qualified through Mission Operations

**Universities**

**Research Institutes**

**Commercial R&D Organisations**

**PRODUCT MANUFACTURE**
EARPA’s system approach to face the Society’s Grand Challenges

Ten Task Forces, connected by cross-cutting issues
www.earpa.eu
EARPA’s system approach to face the Society’s Grand Challenges

- Safety
- Electric Vehicle Systems and Components
- Hybrid Powertrains and Alternative Fuels
- Materials, Design & Production
- Noise, Vibration & Harshness
- Electronic & Communication Systems
- Urban Mobility
- Logistics

Methods and Tools for Virtual Development and Validation

Project Management

Application-driven EARPA task forces

Cross-cutting EARPA task forces
One quick example:
The 5 pillars of EARPA’s Task Force “Methods and Tools for Virtual Development and Validation (MT4V)”
• Expertise and know-how in lower TRL levels

• Several projects with higher TRLs working with the whole automotive value chain
• Area of expertise in automotive and transport R&D
• Members’ expertise in CPS and Smart Systems Integration: Safety, Embedded systems, telecommunications, EE architectures, Powertrains…
Key applications: Smart Mobility & Design Technology

Challenges to be addressed under the ECSEL program and potential support within the EARPA members

- **Roadmap: Resource Efficient Vehicles**
  - Advanced modelling for Green Vehicles
  - ECS: HVAC, Power electronics, dual fuel / LNG / CNG / Hydrogen
  - Connectivity for green vehicles (Charging points, infotainment)
  - Certification: Component and vehicle level
  - Demonstrators and piloting

- **Roadmap: ECS for integrated and multimodal mobility networks**
  - Urban mobility and shared logistics
  - ITS & smart city technology for the multimodal environment
  - New mobility concepts based on connectivity and AD
Key applications: Smart Mobility & Design Technology

Challenges to be addressed under the ECSEL program and potential support within the EARPA members

- **Roadmap: Highly automated and autonomous transport**
  - New robust, secure and affordable EE architectures → ECU / CPS integration, development and/or validation
  - Connectivity and cooperative systems for the HAD from heterogeneous access technologies: 4G, Advanced LTE, ETSI G5, etc…
  - Embedded systems for advanced comfort, integrated safety and road user interaction:
    - Functional safety / HIL / SIL / MIL
    - Vulnerable road user protection through passive and active safety
    - ADAS 2.0 development and validation
  - Implementation of pilots, demonstrators and FOTs
  - New certification and validation methodologies and tools
Potential cooperation

“One stop” to gather expertise for industrially and societal driven projects

- Decades of experience in the automotive R&D field
- Broad range of TRL covered:
  - Research & Industry members in the mobility value chain
- Successfully prepared several RIA and IA project proposals in different European calls
- Experience in the implementation of demonstrators, pilots and FOTs in Europe
Recently accepted ECSEL projects with EARPA members

Partners: AVL, TNO, Tecnalia, IDIADA, Virtual Vehicle, Fraunhofer, etc

High performant Wide Bandgap Power Electronics for Reliable, energy efficient drivetrains and Optimization through Multi-physics simulation

Programmable Systems for Intelligence in Automobiles
Recently accepted ECSEL projects with EARPA members

Partners: AVL, TNO, Tecnalia, TU/e, RISE, Fraunhofer, TUG, AIT, FEV, CEA, etc

Cyber Security for Cross Domain Reliable Dependable Automated Systems

Automated Driving enabled by systems on chip
Further examples

From TF ECS and EVSC

- **ModulED** – Modular Electric Drivetrain (funding: H2020)
- EARPA’s involvement: CEA coordinator, Siemens, Chalmers, TU/e, IKA
- New powertrain integrating inverter directly in the motor using the latest wide bandgap semiconductor (GaN) generation

From TF ECS

- **TRACE** - Technology Readiness Process for Consumer Electronics (funding: CATRENE – EUREKA)
- EARPA’s involvement: CEA, Siemens, FhG, VeDeCom
- Develop and demonstrate methods, processes, tools to facilitate usage of Consumer Electronics components to be deployable more rapidly in the life-critical automotive domain.
A platform for discussion and exchange of views

- Selected Impressions from the FORMForum 2016:
- Panel Discussion, Poster Presentations and Exhibition
- FORMForum 2018: 17th of October 2018
